SUMMARY

B.Tech–M.Tech Integrated Cybersecurity student with a strong foundation in cybersecurity fundamentals, digital forensics, incident detection, vulnerability assessment, and ethical hacking. Hands-on experience through academic projects and a cybercrime internship involving security analysis, monitoring, and investigative support. Adaptable, quick to learn, and eager to contribute across different cybersecurity functions in a professional environment.

EXPERIENCE

Intern – Kerala Police (Cyber Crime Police Station) May 2025 - June 2025 | Thiruvananthapuram, Kerala, India

- Assisted in cybercrime investigations, report writing, and information gathering using OSINT tools.
- Gained exposure to real-world cybercrime workflows, threat patterns, and investigative procedures in a law enforcement environment as intern.

Media Head – GDG On Campus, NFSU Delhi October 2024 - August 2025 | Delhi, India

- Led a student team to capture events through photography, videography, and short-form content.
- Coordinated on-ground media activities and managed timely content delivery.

PROJECTS

AI-Driven Malicious URL Detection and Risk Scoring System December 2024

- Built a Flask-based application to analyze URLs and identify malicious patterns using machine learning.
- It offers probability-based and custom-weighted risk scoring, achieving over 98% accuracy.
- Lightweight, interpretable, and optimized for fast detection without external dependencies.

Intelligent Clipboard Security Tool for Windows May 2025

- A real-time Windows clipboard monitoring tool that detects sensitive data, malicious commands, phishing URLs, and leaked passwords.
- It uses external threat intelligence APIs, offers real-time alerts, hotkey shortcuts, and prevents clipboard sync.
- Implemented alerts and user-focused protections to reduce accidental sensitive data exposure.

Personal Device Monitoring Tool – PMon December 2025

- Built a host-based personal SIEM-like monitoring tool for Windows to collect, correlate, and analyse authentication, process, and USB events using a configurable rule engine.
- Developed a privacy-preserving, local Flask dashboard for real-time alerting, rule management, visualization, and user-driven response without cloud reliance.
- Implemented automated blocking and persistence features, including Windows Firewall IP blocking, USB tracking, and dashboard-controlled auto-start via Task Scheduler.

TECHNICAL SKILLS

- Cybersecurity:** Incident Detection & Response, OSINT, Vulnerability Assessment, Network Security, Log Analysis, Digital Forensics, Malware Analysis (Basics), SOC (foundational).
- Tools:** Kali Linux, Wireshark, Nmap, Burp Suite, Metasploit, Autopsy, FTK, Volatility, Maltego, VirusTotal.
- Programming:** Python, Java, C++, SQL
- Technologies:** Flask, REST APIs, Web Development
- AI/ML:** Feature Engineering, Model Training, Random Forest, Data Preprocessing

SOFT SKILLS

Teamwork | Adaptability | Problem-Solving | Time Management | Communication | Critical Thinking | Leadership

CERTIFICATIONS

- IBM Python 101 for Data Science – IBM** March 2025
- Cisco Ethical Hacker – Cisco Networking Academy** Ongoing

EDUCATION

National Forensics Science University, Delhi Campus 2021 – 2026

B.Tech -M.Tech integrated Computer Science Engineering (cybersecurity)
