

MUHAMMED ASLAH K

CYBERSECURITY | SECURITY OPERATIONS | RISK & DIGITAL FORENSICS

Kozhikode, Kerala | +91 8943044758 | mhdaslah.k@gmail.com | linkedin.com/in/muhammed-aslah-k-86783836a | github.com/ASLAH-K | portfolio-smoky-five-55.vercel.app

SUMMARY

Cybersecurity graduate (Integrated B.Tech–M.Tech) with strong foundations in system, network, and security fundamentals. Hands-on experience through security projects and a cybercrime internship involving monitoring, analysis, and investigation support. Built practical security tools for endpoint monitoring and threat analysis, with particular interest in security operations while remaining adaptable across broader cybersecurity domains.

EXPERIENCE

Intern – Kerala Police (Cyber Crime Police Station)

May 2025 - June 2025 | Thiruvananthapuram, Kerala, India

- Supported cybercrime investigations through structured evidence gathering, OSINT analysis, and detailed report documentation.
- Observed real-world threat patterns, incident workflows, and investigative procedures in a law enforcement environment.

PROJECTS

LLM-Assisted Sigma Rule Optimization System -LARS

April 2026

- Developed an LLM-assisted pipeline and dashboard to optimize Sigma rules by reducing false positives.
- Evaluated Sigma rules against benign and malicious log datasets to measure detection accuracy.
- Identified recurring false positive patterns (users, processes, events) and analyzed causes of alert noise.
- Applied LLM-based refinement to detection logic by introducing filtering conditions, improving rule precision without breaking detection capability.
- Built an interactive web dashboard to visualize rule performance (TP/FP), compare original vs optimized rules, and support analysis workflows.

Personal Device Monitoring Tool – PMon

December 2025

- Developed a lightweight host-based monitoring system simulating core SIEM functionality.
- Collected authentication, process, and USB activity logs and applied rule-based detection logic for suspicious behaviour. Built a local Flask dashboard for alert visibility, acknowledgment, and response actions.
- Implemented tamper-evident SQLite storage with hashed log integrity.
- Strengthened understanding of detection logic, alert noise, and endpoint-level attack surface.

Intelligent Clipboard Security Tool for Windows

May 2025

- Developed a Windows clipboard monitoring tool detecting sensitive data, phishing URLs, and leaked credentials using threat intelligence APIs and real-time alerts.
- Implemented user-focused protections to reduce accidental data exposure.

AI-Driven Malicious URL Detection and Risk Scoring System

December 2024

- Developed a Flask-based ML application to classify malicious URLs using lexical feature analysis.
- Lightweight, interpretable, and optimized for fast detection without external dependencies.

TECHNICAL SKILLS

- Cybersecurity:** Incident Detection & Response, Log Analysis, Threat Monitoring, OSINT, Vulnerability Assessment, Network Security, SIEM Fundamentals, Digital Forensics.
- Tools:** Kali Linux, Wireshark, Nmap, Burp Suite, Metasploit, FTK, Maltego, VirusTotal.
- Programming and Scripting:** Python, bash, Java, C++, SQL, Flask, REST APIs, Web Development.
- AI/ML:** Feature Engineering, Model Training, Random Forest, Data Preprocessing

SOFT SKILLS

Teamwork | Adaptability | Problem-Solving | Time Management | Communication | Critical Thinking | Leadership

CERTIFICATIONS

- IBM Python 101 for Data Science** – IBM March 2025
- Cisco Ethical Hacker** – Cisco Networking Academy Ongoing

EDUCATION

National Forensics Science University, Delhi Campus

2021 – 2026

Integrated B.Tech–M.Tech Computer Science Engineering (Cybersecurity)
